## Efforts to Promote Hand and Reconstructive Microsurgery

### Setting up of the State of the Art “Ganga Microsurgery Training Institute” for advanced training in Micro Surgery at Ganga Hospital

Lack of laboratory training in reconstructive microsurgery was a big handicap for the growth of the speciality in India. This was made good with the setting up of a lab with standards as good as abroad. This has emerged as a popular training lab in the world. **1492 Surgeons from 70 countries and 140 cities in India have been trained in the lab.** Many trainees have gone back to their respective places and did the first Microsurgical Flaps and Replantations in their units.

**Comment of Dr Robert D Acland, Louisville, USA, the pioneer in Microsurgery on his visit to the Microsurgery Lab at Ganga Hospital, February 2006.**

*“I am so happy to be here in your new United Nations of Microsurgical progress and education. This feels the same, in terms of energy and excitement as Louisville in the 70’s, or Ljubljena in the 80’s. My best wishes for your long continued success.”*

In the 1<sup>st</sup> September 2007 issue of the **British Medical Journal**, Careers, Dr Philip Yong, one of the trainees from London, wrote an article about the high standards of training offered in the Microsurgery Lab of Ganga Hospital. This article created tremendous enthusiasm among the trainees around the world to visit the centre.

### OVERSEAS TRAINING

but noticeable improvement over the course. Starting with little knowledge in this field, I finished confident in various microsurgical principles and practices, having acquired useful skills which I could use at home.

#### Flights and food

I booked flights after emailing the hospital to confirm an available week. Arriving in Coimbatore by plane on a Sunday evening, I was taken to my hotel by a driver from the hospital. The Sri Lakshmi Hotel was inexpensive (£10 a night) and a 10 minute walk from Ganga Hospital. The room was comfortable, with noisy air conditioning and reliable hot water. I had cable television with CNN, BBC World, and live Premiership football as well as local broadcasting. Food was not provided in the hotel, but an adjacent restaurant served excellent south Indian food, with a two course meal for £1.50. Otherwise I ate in the clean and cheap hospital canteen. At a medical bookshop close by, books were considerably cheaper than in the UK – the *Oxford Handbook of Clinical Medicine* cost £2.50.

#### Why India?

Studying in India has several advantages. The course fees were £300. Even taking into account the price of a return flight to Bangalore (£400), connecting flights to Coimbatore (£20), and cost of food and lodging, I still saved money compared with a course in the UK. Each week long course has only two trainees, so supervision is close and thorough. I organised my trip around annual leave as the course dates are flexible. Furthermore, when time allows, you can go to theatre and watch real life microsurgery to consolidate the principles learnt on the course. Coimbatore is hot and local food may not be to everyone's taste. Western food was not available in the hospital canteen, but there were no other downsides.

I also had a chance to meet local surgical trainees. I was amazed to learn that they worked seven days a week from 7 am to 10 pm, with two days off a month. This certainly put the working time directive into perspective. Philip Yong, SHO in plastic surgery, Queen Victoria Hospital, East Grinstead [blintang@doctors.org.uk](mailto:blintang@doctors.org.uk)

## Microsurgery in India

Philip Yong travelled to India to learn microsurgery

Coimbatore is the second largest city in the state of Tamil Nadu, with a population of two million. It is not a major tourist destination. Ganga Hospital, Coimbatore, is a specialist trauma, orthopaedics, and plastic surgery centre in south India with 400 beds. A five day course in microsurgery is offered by the plastic surgery department.

#### Life's a beach

Attending a microsurgery course is a requirement for plastic surgery trainees. However, the skills and techniques, especially knot tying and tissue handling, are useful in all surgical specialties. No previous experience is required, and the course is recognised in the United Kingdom. It could be combined with a holiday on the beaches of Kerala in the south west (120 miles) or in the nearby hill station of Oshamund (50 miles).

I spent five days in an air conditioned microsurgical training institute. Each day comprised eight hours of teaching. The course is a clone of Robert Acland's course taught at the Kleinert Institute in Louisville, with only two students at any time. His microsurgery training manual was available for £3.50, complementing the week's activities. We were supervised by an experienced nurse specialist, who helped as and when needed, and we had regular

input from consultants. Zeiss floor mounted microscopes were used, as in theatre, adding a touch of realism.

#### Rats, veins, and videotape

The complexity of the course increased gradually, with regular breaks every few hours. Each day started with a video of Acland talking and demonstrating, followed by practice on anaesthetised laboratory rats. On the first day, we watched an introductory video about microscope use and basic operative technique, we then practised by suturing a rubber glove with 10-0 nylon and attempted to anastomose a chicken leg artery. In the next few days, we tried to clamp, sever, and anastomose numerous rat

**Starting with little knowledge in this field, I finished confident in various microsurgical principles and practices, having acquired useful skills which I could use at home**

femoral arteries and veins. It was satisfying to release the clamps and have a flowing vessel. On the last day, vein grafts and end to side anastomoses were attempted. The rat vessels used are around 1 mm in diameter, smaller than most vessels likely to be encountered clinically. I practised on seven live arteries and three veins in total, with mixed results

## **Creation of Paid Fellowships for training in Hand and Reconstructive Micro Surgery**

**Dr S Raja Sabapathy** took efforts to institute Fellowships for training younger surgeons in the field of Hand and Microsurgery. This was in collaboration with industry leaders in the field. These paid Fellowships attract quality surgeons towards the field and has greatly changed the scenario of Hand and Microsurgery training in the country. These fellowships are the first of their kind and are most sought after by candidates completing M Ch training in Plastic Surgery.

**This Fellowship enables middle level senior people in public hospitals and teaching institutions to spend 8 weeks** at Ganga Hospital learning the protocols of management of different problems. In turn it is hoped that the trainees will impart the knowledge gained to their students. The first of this is

## **Ganga Hospital – Johnson & Johnson Fellowship in Hand and Reconstructive Microsurgery**

Mr. William Dearstyne, Company Group Chairman, Johnson & Johnson visited the Hospital on 5<sup>th</sup> March 2002. During the presentation of the work of the departments of the Hospital it was suggested that paid fellowships as available abroad will encourage the faster spread of Reconstructive Microsurgery. The advantage of its application in Hand Surgery and Trauma reconstruction and its need in India was stressed. Mr. Dearstyne was impressed of the potential of Ganga Hospital for such collaborative effort. As a follow-up of the visit, two Fellowships were set up. Each Fellowship is of the value of Rs 25,000. Now it has been upgraded to Rs 37,500. Johnson & Johnson provide the funding and the Ganga Hospital provides the training. The selected candidates spend 6 to 8 weeks at Ganga Hospital and they take part in all clinical and academic activities of the unit. They also undertake the weeklong Microsurgery laboratory course at the Ganga Microsurgery Training Institute. We had an overwhelming response when the applications were called for vindicating the concept with which we set the fellowship.

### **Ganga Hospital – Carl Zeiss Fellowship in Hand and Reconstructive Microsurgery**

Carl Zeiss, the pioneers in the manufacture of Operating Microscopes collaborates with thought leaders around the world in setting up training centres. The visit of Mr. Ven Raman, Director, Carl Zeiss in 2000 paved the way for the setting up of the Ganga Microsurgery Training Institute. Stimulated by the success, Carl Zeiss came forward to sponsor two fellowships every year. The selected candidates will spend 8 weeks in the Department taking part in all clinical and academic activities of the unit. Each Fellowship is worth Rs 50,000, making it the most valued Fellowship in the field in the country. It is my sincere hope that these educational initiatives would nurture talent and help produce leaders in the field.

## **Making India, the Destination for Advanced Training.**

### **Institution of Bruce Bailey Traveling Fellowship (for British Trainees)**

Mr. Bruce Bailey, Retired Senior Consultant Plastic Surgeon at Stoke Mandeville Hospital, United Kingdom passed away in April 2001. He was responsible for training many Plastic Surgeons from India including Dr S Raja Sabapathy. He opened the windows of opportunities for many young surgeons from our country. In the memory of this great man **“Bruce Bailey Traveling Fellowship”** was set up by Dr S Raja Sabapathy. Bruce visited India many times and loved it. It is felt that setting up a Fellowship to enable a British Trainee visit our unit for a period of 6 to 8 weeks is a good way to keep the memory of the great man alive. It surely will build bridges between the two countries to mutual advantage. The Fellowship is recognized and announced in the newsletters of the British Association of Plastic Surgeons and the British Society for Surgery of the Hand for the information of the interested candidates.

#### **It is worthy to add the impressions of the Bruce Bailey Fellow about the scheme.**

“I am a Specialist Registrar in Plastic Surgery at Canniesburn Hospital in Glasgow in the UK, in my final year of training. I have been very lucky to be selected as the very first Bruce Bailey Fellow, and I have been at Ganga Hospital for the last 2 months. During this time, I have been involved in the management of more major upper and lower limb injuries **than I would normally see at home in several years. The opportunity to be a part of the team at Ganga, working in a different country with a completely different culture, whilst maintaining the highest clinical standards, as good as the best units in the UK, has been a fascinating experience.** There are many differences, but also many similarities between the two systems! The Bruce Bailey Fellowship has been a great learning experience for me....”

**- Mr Rodrick Dunn – 2002**

Mr Dunn won the **Lester Surgical and Heinz Waldrich Prize** worth £ 1500 for the best Micro surgically oriented paper presented during the BAPS meeting held at London, Dec 2003 for the paper, ***‘Passage to India – Bruce Bailey Fellowship in Hand and Microsurgery’***. The paper was about the experience and the work done during his fellowship at Ganga Hospital, Coimbatore. Rod presented the prize of £ 1500 worth of Micro instruments to the department.

### **Ganga Hospital - Synthes Fellowship in Hand and Reconstructive Microsurgery**

The Department of Plastic, Hand and Microsurgery and Burns, Ganga Hospital, Coimbatore and Synthes, Asia Pacific Region have jointly started an educational initiative of training fellowships in the Department. The selected Fellows will spend 6 – 8 weeks in our department and will also undergo one week of Microsurgical Lab course at the Ganga Microsurgery Training Institute.

The Candidates selection is on an international basis and they could be Plastic Surgeons or Orthopaedic Surgeons interested in Hand and Trauma Reconstructive surgery. We consider that it would be ideal for candidates, who have completed their formal basic training and have some work experience in institutes or any private sector with adequate infrastructure. It will also be useful for 'mid career' surgeons.

*“..I have had a remarkable time in India. I have just about got to grips of Ganga Philosophy of Trauma Management and learnt a few valuable maxims. I have seen more here in 6 months than in the several years back home. Such is the intensity of your work.... ”*

## Creation of Ganga Hospital – Johnson & Johnson Visiting Professorship in Hand and Microsurgery

A new chapter in our continuing efforts for the promotion of Hand and Microsurgery was made in the year 2005 by the starting of the Visiting Professorship programme. It is a joint effort of the Dept of Plastic, Hand and Reconstructive Microsurgery and the Ethicon division of Johnson & Johnson. A hand surgeon of international repute is invited to spend a week in the department. The visiting professor lectures and takes part in all the academic and clinical activities of the department. This interaction results in cross fertilization of ideas for the benefit of patients and builds bridges between departments, hand surgery communities and nations.

### **Medecins Sans Frontieres (Doctors without Borders)**

Medicines Sans Frontieres is an organization which renders medical care in regions conflict and its service was recognized for the Nobel Peace Prize in the year 1999. At the recommendation of Plastic Surgeon, Dr. Chanjiv Singh, Ms. Farhat Mantoo, Human Resources Officer of MSF – India, New Delhi visited our centre on 1<sup>st</sup> August 2008. She penned the following words in our visitor's book.

“I thank you for the hospitality. I have seen the Hospital and I am really impressed. I found the people welcoming and the best was seeing the Iraqi patient and your nonverbal communication. You can really bridge barriers. Dr. Sabapathy, I appreciate your support and willingness to extend your expertise to all”.

- Ms. Farhar Mantoo

She found that the type of work done and the learning opportunities available in the department would be very useful to surgeons in regions where reconstructive surgery is much needed. As a pilot project 2 surgeons from Iraq, from the region of Sulaimaniya came for a few weeks and also took the microsurgery lab course. They found it useful and visit to Ganga Hospital has become a routine to surgeons with responsibility in reconstructive surgery and maxillo facial surgery in the region. So far 14 surgeons from Sulaimaniya, Iraq have come for training and we are happy that indirectly we are able to make a difference in the lives of people far away.

### **Save the Working Hand – Phase I - Poster project - 1995**

A poster campaign with the Rotary Club of Coimbatore Metropolis was started under the banner, ‘**Save the Working Hand**’, emphasizing the need for safety in the workplace. Dr S Raja Sabapathy was the Project leader. **5000 posters** in different colours with good messages were printed (2 on the need for safety in the workplace and the third about the first aid measures to be taken in the event of injury) and distributed to all industries. Campaign talks were also given in the industries. **It had a very good effect and all industries recorded a decrease in the number of accidents.**

## **Save the Working Hand – Phase II – Surgery for Poor Workers – 1998**

We reduced the number of injuries, but we had higher goals. In the unfortunate event of an accident we wanted every injured patient to get the best possible treatment. A Rotary matching grant project was done which facilitated reconstructive surgery for poor patients who needed specialized treatment including major microsurgery. 100 patients were treated. **The funds from the grant were utilized for the consumables with Dr Raja Sabapathy and team waiving their fees. Rs 391,000 was the grant amount, but the total project value was Rs 1,095,000. So every ‘rupee of the grant went a long mile’.**

### **'Save the working hand' project launched**

By Our Staff Reporter  
COIMBATORE, Dec. 21.

The community service project called "Save the working hand" jointly sponsored by the Rotary Club of Coimbatore Metropolis and Ganga Hospital, was launched here on Monday by Mr. S. P. Ilangovan, Secretary to the Government of Tamil Nadu, Department of Labour and Employment.

Speaking on the occasion, Mr. Ilangovan emphasised the importance of hand or fingers without which even pushing a pen would be a difficult proposition. Gestures were of vital importance to danseuses, speakers and academicians. Hands were also used to show love and affection as the first thing that one tends to do on meeting the near and dear ones was to hug or embrace them.

Mr. Ilangovan appreciated the Rotary Club and Ganga Hospital for having taken up such a unique project for the welfare of society, especially for the workforce. Explaining the project Dr. S. Raja Sabapathy, Chairman, project committee and the Ganga Hospital, said, unlike in the case of other severed or dismembered limbs, no "prosthetic hands" did not exist. Hand injury was not a medical problem.

Dr. Raja Sabapathy said a developing economy like ours could ill afford the disability to the worker, loss of productivity, and employment. He said that most of the injuries could be prevented if safety rules were strictly adhered to.

He further stated that 40 per cent of all industrial accidents were hand injuries and most of them were preventable. A study of the pattern of injuries revealed that these happened to young people or to the seasoned workers who did not take precautions.

Referring to the precautionary measures, Dr. Raja Sabapathy, said in the case of severed fingers, the first thing one ought to do was to put the dismembered part in a polythene bag and tie it tightly. This bag must be placed in an ice-filled vessel or a container, the amputated finger or hand must not be directly-put in ice or any solution.

He said it was now possible to reattach even totally amputated hands through microsurgery, and to educate the people on these aspects, the Rotary Club of Coimbatore Metropolis had designed posters which were exhibited at the work places emphasising the need for safety consciousness to prevent hand injuries.

Many industries reported lesser incidence of accidents after the posters were exhibited at the work places. Others who spoke on the occasion included Mr. V. K. Lakshmanan, deputy leader of the Opposition in the State Assembly, Mr. A. Natarajan, M.L.A., Mr. V. S. Srinivasan, president and Mr. S. Satish, secretary of the club.

Tamilarasan, had lost his thumb and half of hand in an accident and by microsurgery a new thumb was created from his great toe. He went back to his job again. A disastrous situation was turned into useful recovery and he was confident to face the world again. 100 such patients were treated, by making complex microsurgery available to the masses.

**The Hopes of more than 100 families were kept alive because of this Rotary project.**

**The first beneficiary of the project Dec 1998 Mr. Packiaraj, 18 year old worker in a packaging company who had thumb amputation. He is back in the same job. Here he is seen greeting Assistant Governor Rtn. Ramesh on the occasion of the inauguration of the next project**

The project was a great success and it was decided to do it on a bigger scale. It was renamed as **'Help for the Hands in Need'** to enable us to serve not only injured workers but also children with spastic hands and with birth defects. Swamini Pramananda inaugurated this scheme and it was a matching grant scheme again with the Rotary Club with the grant being doubled to US \$ 12000. **Due to the free service of the medical team, the total project value was US \$ 30000. This time in addition to accidents, children with birth defects and spastic hands were also treated.**

## Creation of Ganga Hand Injury Support Group

This group was inaugurated by Hon Justice Shivaraj V. Patil on 20th December 2007 in the presence of Dr B A Anantharaman, President, Indian Society for Surgery of the Hand. It is dedicated to better the lives of people who suffer serious injury to their hands and upper extremity. The group will comprise of patients who have suffered such injuries, surgeons involved in the care of patients, therapists, social workers, industrialists and any one who is willing to give a helping hand.

Good recovery after hand reconstruction often takes time, and it requires perseverance on the part of the patient. No one is able to provide this support better than a person who has been in similar circumstances and is presently doing well. Mr. Srinivasan and Mr. Biju who had sustained very serious hand injuries gave inspirational speeches on the occasion. Former patients in this group will give valuable support to the patients and their families. It will provide the network and the needed information.

Present day society does offer help to differently able persons. But many are not aware of the opportunities available. The group will serve as a resource base to help people know the possibilities.

Face the world with confidence

Open up windows of opportunities

### **Project ‘Swasam’**

An ambitious project to provide free surgery for deformity correction in poor children was inaugurated by our beloved past President Dr APJ Abdul Kalam on. This allows us to reach out to the needy. A separate ward has been created wherein totally free surgery is done to all needy children.
